

Hello my friend,

I hope that you enjoyed the short break, and you are back with some new forces!  
April is a full month, so I share with a lot of enthusiasm the latest activities.

As usual, Ramona ([@Enache, Flori-Ramona](#)) can answer all your questions and support you!

Do you already follow us on Social Media? There you can find more details about our actions!

April is about sustainability!  
On the occasion of the **Earth Day** which is fast approaching, we decided to have a prolonged celebration with a series of workshops about acting sustainable and being more friendly with the nature!

By the way, on 22 of April, what will you do for the Planet?

One of the main activities from this month celebration is the sustainability workshop organized in

**Stefanini office in Bucharest, on 27 of April, from 16 to 19.30.**

This discussion will cover topics as SDGs, circular economy, what we can do individually to become more environmentally responsible and what examples we can follow.

This afternoon will be full of playful activities held by Ramona, so you can meet her personally.

Here is the form if you want to participate:

## Sustainability workshop

Yes, this internal workshop, about what we can do to act more sustainable, was promised from the previous newsletter, but April is not only about it!

During this month we started the physical activities with children and youngsters from disadvantaged communities, following the same topic. They were very enthusiastic about being involved in different types of activities from which they can learn new things, and their favorite activity was to imagine and present a sustainable city. Did you ever try to imagine how this should be?

Regarding the online courses that I was telling you last time about financial education and public speaking, they are at mid-journey and as a snip, I can tell you that the kids enjoy them as well.

### Did you know?

CIRCULAR ECONOMY is a process in which the materials and objects are used on and on, so they will produce as less waist as possible.

To increase the circularity of products, some business models started already to work all over Europe to find new purposes or to repair the old object. As part of circular economy, we find accessible to be implemented at home, as well, the following processes:

Repair, Rethink, Reuse, Reduce, Refuse, Recycle, Recover, Regift, Rot.

Oh, we will discuss also about the circular economy models during the face-to-face workshop. **Will we meet there?**
